

resetting edge after scamware attack

Well to reset Edge I have found deleting

```
C:\Users\%username%\AppData\Local\Packages\Microsoft.MicrosoftEdge_8wekyb3d8bbwe
```

Clears it, including favourites and all. That does break Edge for the user. To get it running again from an admin PowerShell prompt;

```
Get-AppXPackage -AllUsers -Name Microsoft.MicrosoftEdge | Foreach {Add-AppxPackage -DisableDevelopmentMode -Register "$($_.InstallLocation)\AppXManifest.xml" -Verbose}
```
